REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: None of the prior art references, singly or combined, teaches or suggests pigment flakes comprising an aluminum substrate and a coating consists of a layer of silica or silicon dioxide hydrate wherein the layer does not absorb visible light and has a thickness limited from 250 to 450 nm and optionally a surface modifying layer. As shown in the Examples of the instant specification and demonstrated in the Table and Graph of the Affidavit filed December 10, 2007, the thickness within the claimed range significant affects in metallic effects. The Schmid '086 patent (US 5,763,086) requires a coating with at least a packet layer of (A) silica or silicon dioxide hydrate and (B) silicon-containing layer that is transparent to visible light; that is the Schmid'086 requires a coating of at least two separate layers, one does not absorb visible light and another contains silicon dioxide or silicon dioxide hydrate. The instant claims on the other hand recites one single layer in the coating that is both transparent to visible light and consists essentially of silica or silicon oxide hydrate and further precludes the presence of two separate layers by the language "consists of". The Schmid '504 patent (US 5,607,504) requires the presence of a high refractive dielectric layer in the coating whereas the claimed invention precludes such layer with the claim language "consists of". The WO'195 publication does not teach a dielectric layer having the thickness within the claimed range.
2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
